## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q1

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

##### ***Input Format***

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

##### ***Output Format***

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

**Sample Test Case**

Input: 10  
10 20 30 40 50 60 70 80 90 100  
Output: 100

**Answer**

```
import java.util.*;  
class main{  
    public static void main(String[] args){  
        Scanner scan=new Scanner(System.in);  
        int N=scan.nextInt();  
        int[] arr=new int[N];  
        for(int i=0;i<N;i++){  
            arr[i]=scan.nextInt();  
        }  
        Arrays.sort(arr);  
        int secondsmallest=arr[1];  
        int thirdlargest=arr[N-3];  
        int sum=secondsmallest+thirdlargest;  
        System.out.println(sum);  
    }  
}
```

**Status : Correct**

**Marks : 10/10**
